

ALEKSANDRE TAVADZE

Project title: The regulation of innate immunity and the pathogenesis of rare autoinflammatory diseases

Duration	3 months
Short Bio	I am a pediatrician working in medical Center Mrcheveli. I finished my general pediatric residency a year ago. The experience gained in Istituto Giannina Gaslini gave me inspiration to start a subspecialization in pediatric rheumatology, which I started 2 weeks ago.
Home Institution	Medical Center Mrcheveli
Host institution	Istituto Giannina Gaslini
Project description	Recurrent fever syndromes are a group of autoinflammatory diseases that have usually their onset in childhood but in most cases persist overtime. Nowadays several treatment are available for these conditions. Therefore, an optimal control of the disease is nowadays a realistic goal that is essential to avoid the occurrence of long-term complications. Recommendations are available for the treatment of these diseases; in light of that, it is important to monitor the disease activity and response to treatment overtime.
Personal statement	As I had a chance to see a great number of patients with the above mentioned diseases as well as other recurrent fever syndromes it will be much easier for me to recognise them in my practice and try to avoid the complications those patients might have without proper treatment. The relationships with Gaslini and especially with Printo will be very beneficial for me as well as my colleagues and most importantly Georgian patients.
